Correlation & Message Sessions

Message Correlation

Messages have correlation identifier

- Often in message header

Group related messages together

- Sequence of messages

Request-reply message pattern

- Correlate reply with request

Enterprise Integration Patterns

- Gregor Hohpe

Correlation in Brokered Messaging

Correlation in Brokered Messaging

CorrelationId

- Used for more efficient routing between topics and subscriptions

SessionId

- Used to correlate messages in receiving applications

Enabling Correlation - Sending

Sessions are required on messaging entities

```
// Create a description for the queue.  
var rfidCheckoutQueueOptions =  
    new CreateQueueOptions(AccountDetails.QueueName)  
    {  
        RequiresSession = true  
    };  
  
// Create a queue based on the queue description.  
await administrationClient.CreateQueueAsync(rfidCheckoutQueueOptions);
```

Session ID set before sending message

```
// Create a new message from the order item RFID tag.  
var tagReadMessage = new ServiceBusMessage(orderJson);  
  
tagReadMessage.SessionId = sessionId;
```

Enabling Correlation - Receiving

Accept a Message Session using a ServiceBusSessionReceiver

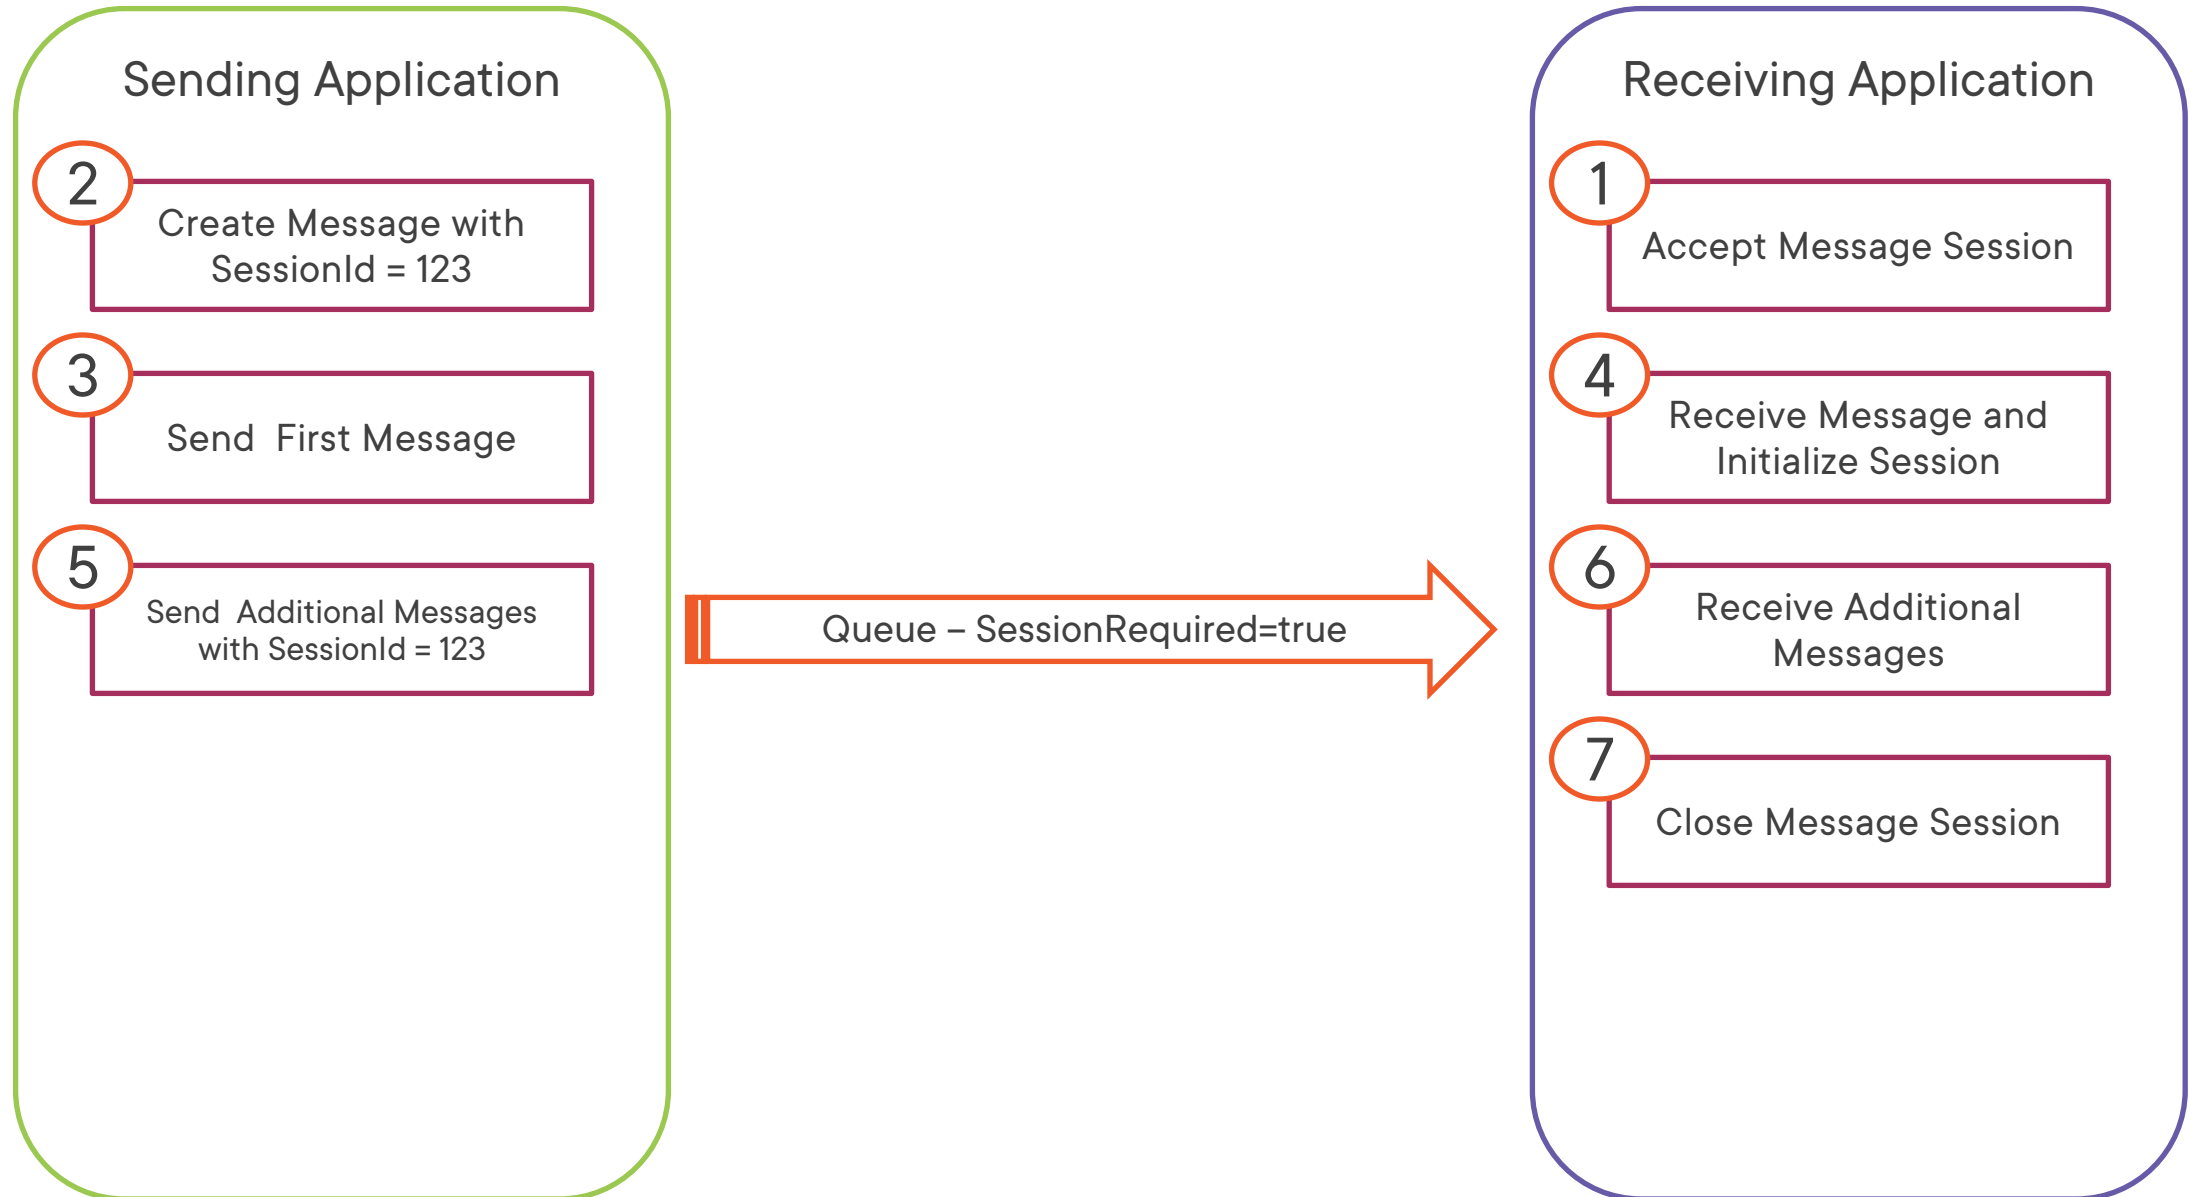

```
// Create a session receiver for the next session on a queue  
var sessionReceiver = await serviceBusClient.AcceptNextSessionAsync(QueueName);
```

```
// Create a session receiver for a specified session ID  
var sessionReceiver = await serviceBusClient.AcceptSessionAsync(QueueName, sessionId);
```

Receive a Message from the Message Session

```
// Receive a message  
var message = await sessionReceiver.ReceiveMessageAsync();  
  
// Process the message  
  
// Complete the message  
await messageSession.CompleteMessageAsync(message);
```

Using Message Sessions

Demo

Using Message Sessions

- Creating a session enabled queue
- Sending messages in a session
- Receiving messages in a session

Using Message Sessions Demo Scenario

Tag Reader

RFID Reader

Azure Service Bus

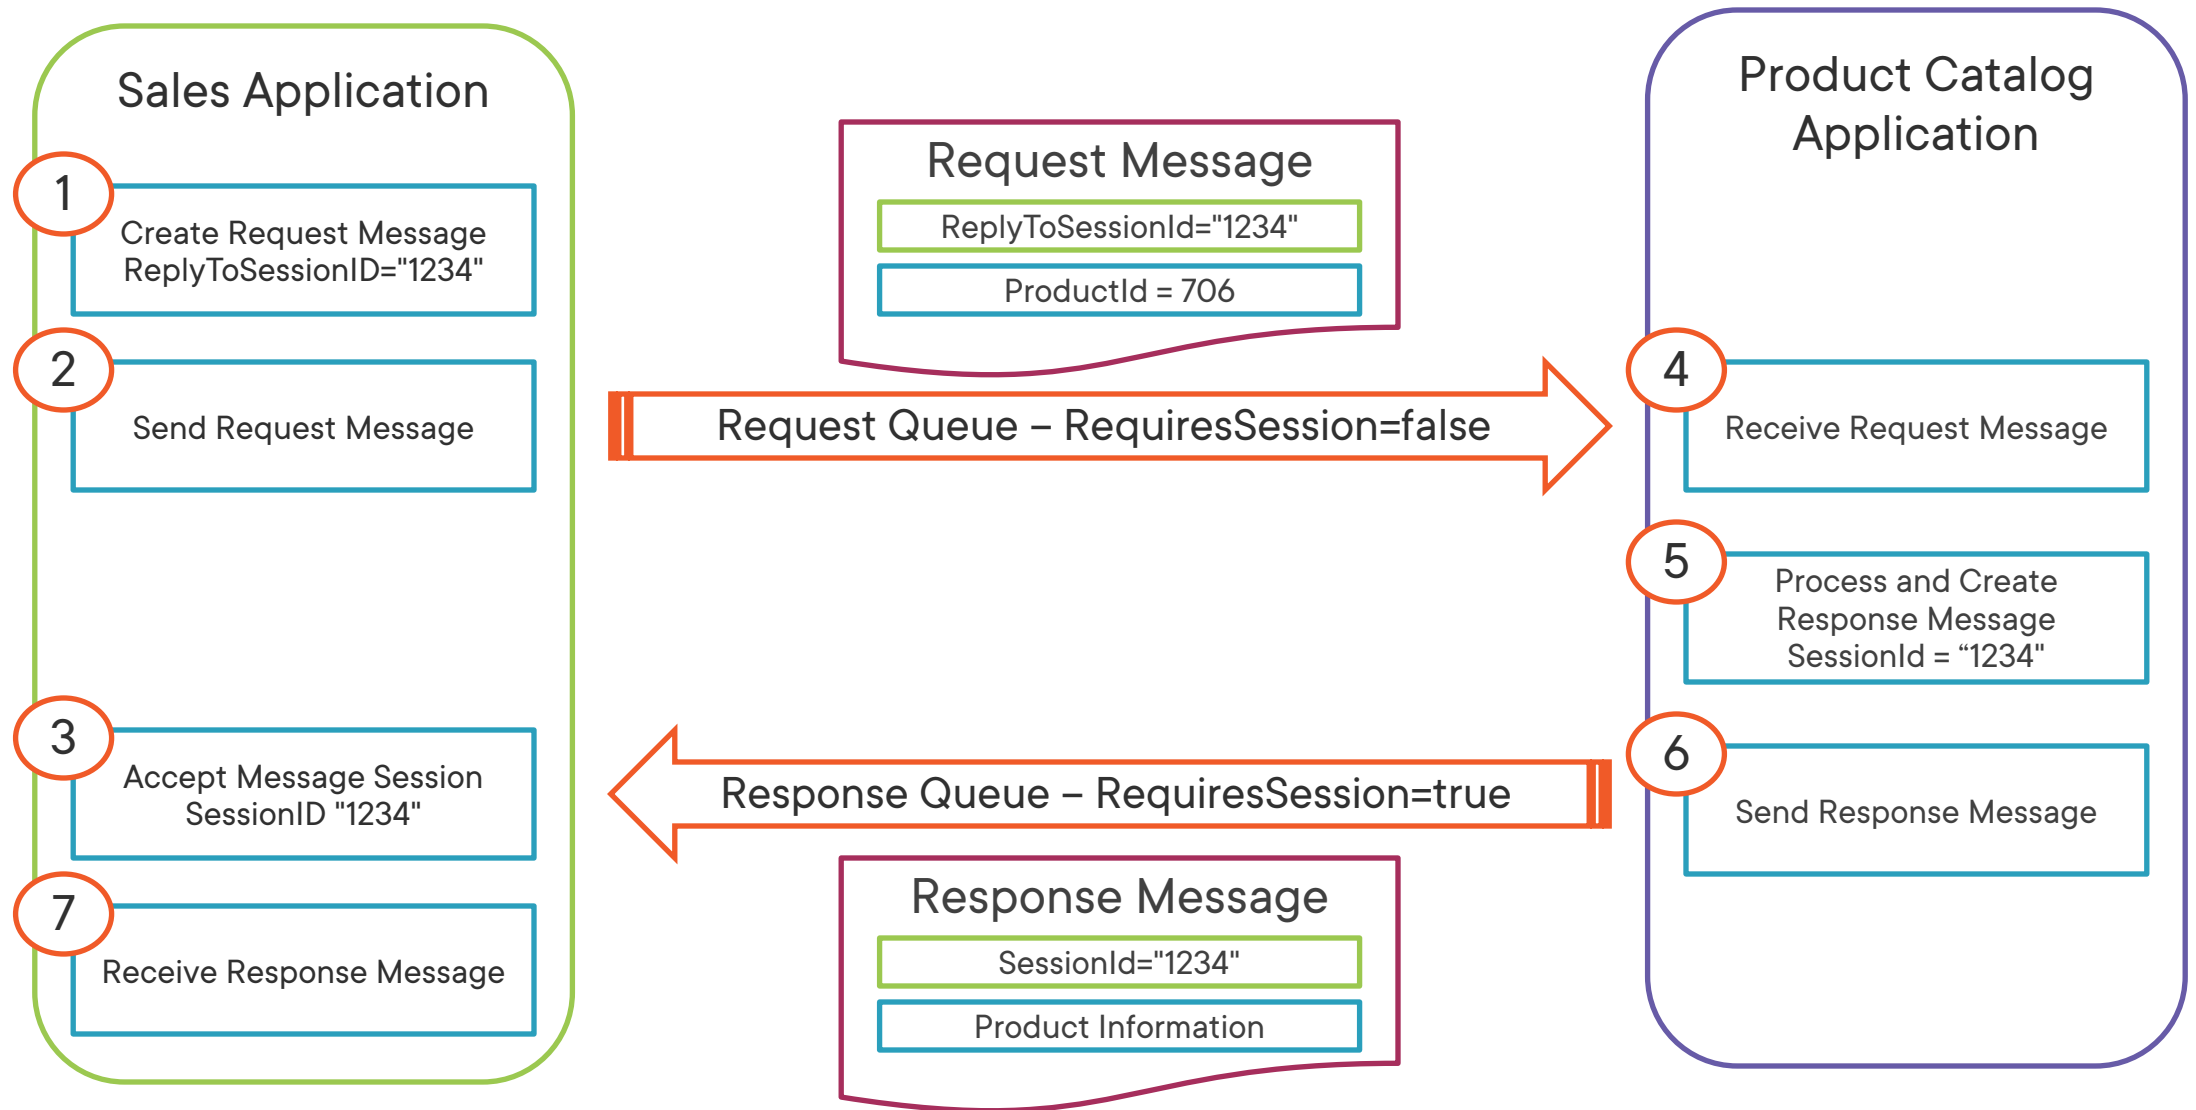

Checkout

Billing Application

Request-Response Messaging

Request-Response Messaging

Demo

Request-Response Messaging

- Asynchronous request response messaging
- Correlation using message sessions

Summary

Sessions can be used to correlate messages in a receiving application

Sessions must be enabled on the queue or topic

SessionID property must be set on messages

Sessions can also be used for correlation in request-response messaging
